CLICK & COLLECT - BASE MODEL

FEATURES

The base click and collect model is a perfect budget option for a smaller operations such as a retail store with minimal staff.

If you offer online purchases, simply place a bank of lockers in the store. Once a purchase comes through, either use the barcode of the POS software, or use any simple barcode generator available for free online, place the product in a locker, and scan the barcode.

- Then SMS that barcode to the customer.
- The customer simply scans the barcode at the locker bank, and the pickup item is revealed.
- Locker banks can be customised in colours and sizes, specific to your needs, with up to 64 lockers possible.
- Requires power.

CLICK & COLLECT - SOFTWARE

FEATURES

Beneficial for larger sites that want to track the locker use with dashboard reporting. The process of click and collect works the same as the base model, but this model also allows for the lockers to be used as standard staff lockers at the same time.

- The software can indicate which lockers are being used at anytime, and how long a locker has been locked for. The addition of the display allows for master key functions as well.
- Locker banks can be customised in colours and sizes, specific to your needs, with up to 64 lockers possible
- Requires power, data and server.

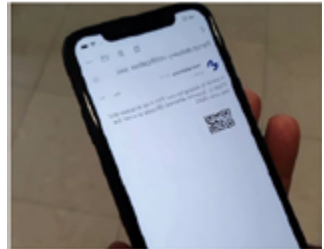

PARCEL PICKUP - COURIER AGNOSTIC

FEATURES

Perfect for use in Apartment blocks and Leisure/Aquatic Facilities, this lock system allows for any courier to attend the locker bay, insert a provided customer number, and deliver the package.

- The recipient is instantly notified where and how to easily pick up the parcel from locker. The recipient simply enters a PIN code, and the delivery is revealed.
- Facilities can also opt for an integration with their facility management system to have all customer details automatically entered into the software.
- Locker banks can be customised in colours and sizes, specific to your needs, with up to 32 lockers possible.
- Requires power, data and a server.

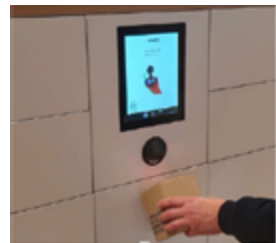

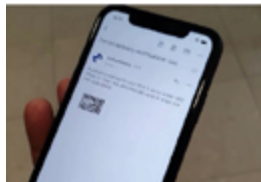

PARCEL PICKUP - CORPORATE

FEATURES

This model requires staff to enter the details of the package to deliver, so is ideal for the corporate sector utilising mail rooms or concierges.

- The package, be it an internal item, or a delivery dropped off by a courier, is entered into the software, and the recipient is either created or selected from a staff list.
- The software prints off a barcode which is then scanned at the Parcel Pickup Locker Bank
- The recipient is instantly notified where and how to easily pick up the parcel from the locker.
- The recipient simply scans the QR code, and the delivery is revealed.
- Requires power, data and server.

PRODUCT CUSTOMISATION

We focus on delivering products to our customers that meet their specific requirements. As a result of our manufacturing capabilities, if you're looking for a custom size, colour or product, chances are we can do it! Contact your local sales representative for more information.
